

A Quick Guide to Strawberry Farming in India

In the past, strawberries were cultivated in large open spaces. But, they are now produced in greenhouses as strawberries are expensive during off-season periods. Strawberries grown in a greenhouse are of excellent quality and in large quantities compared to those grown under normal field conditions.

If you are interested in cultivating this fruit, you can use a versatile tractor like [Captain Mini Tractor](#) for this purpose. It is well-suited for small-scale farming operations like strawberry cultivation. This tractor can navigate narrow rows and spaces efficiently, making it ideal for tilling, planting, and maintaining strawberry beds.

Strawberries are cultivated in some parts of India, such as Himachal Pradesh, Uttar Pradesh, West Bengal, Delhi, etc. They are very rich in nutrients, especially vitamin C, iron, potassium, and fibre.

Recommended Indian Tractor Manufacturers for Strawberry Growers:

If one wishes to buy a tractor for strawberry cultivation, the following section will provide information about some of the top [India tractors](#) manufacturers.

- Force Tractors
- Sonalika Tractors
- Kubota Tractors
- Mahindra Tractor
- John Deere Tractor

Strawberry Farming Process:

Some of the processes necessary for strawberry cultivation are soil preparation, weather conditions, irrigation and harvesting time etc. If you are planning to cultivate strawberries, you can check the various processes of this cultivation below.

Ideal Climate Conditions:

This plant does not develop during the entire winter season. However, as temperatures increase and days lengthen, the plant begins to grow and produce flowers. The best climate for strawberries is within a temperature range of about 15°C to 25°C.

Soil Requirements and Preparation:

The soil's pH should be between 5.5 to 6.5. Strawberries grow well in well-drained, loamy soil rich in organic matter. Growers should choose a sunny location. To plough the land, they can use any compact tractor of [Captain Tractor](#). These tractors are highly versatile, so one can attach a plough for ploughing purposes.

Right Harvesting Time:

In hill stations, the strawberry harvest time is March to April or early May. However, in northern states, harvest time is from December to January and can continue until March.
